Product Description:

This ABS wheel speed sensor is a critical component of the vehicle's anti-lock braking system (ABS). It monitors the rotational speed of the wheel and transmits this data to the ABS control unit to prevent wheel lock-up during braking and enhance vehicle stability. Manufactured to OE standards (with many parts featuring the WABCO brand as the OE manufacturer), this ensures accurate signal transmission, reliability, and durability. Designed as a direct replacement for the original part with no modification required.
